

Axion™ TGR-Strap is a high temperature webbing designed for maximum strength and durability. Made exclusively with the highest temperature and strength fibers available today, the proprietary blend of aramid and basalt fibers delivers the best strength to weight ratio of any high temperature webbing. The new 'pull-stop' construction of Axion™ webbing delivers superior resistance to the longitudinal and axial stresses typically found in webbing or straps found in many insulation covers. Designed for maximum product lifecycle, only Axion™ textiles can deliver this level of strength, thermal performance and long life. This family of textiles is also safe with non-respirable fibers, will not burn, and is asbestos and ceramic fiber free. Axion™ textiles are unaffected by many acids, alkalis and solvents.

**BASE WEBBING:** Proprietary aramid/basalt blend

**WEAVE:** Pull-Stop

**TEMPERATURE  
RESISTANCE:** <600°F
